

STACKIT Server Backup Management

→ Automated, monitored server backups with easy restore process

The STACKIT Server Backup Service Management enables you to manage the backup and restore processes for your own server without complications. This service can be activated through a easy to use management interface or API and will protect your organizations against data loss. Backups are created automatically, and all data can be easily restored without third-party help.

APPLICATIONS

Protection of data stored on the server

Avoid data loss through accidental deletion, defective hard disks, hacker attacks, or insider threats and payment of ransomware ransoms.

Fast system recovery

In the event of a failure of the operating system or software, easily recover the system yourself, without having to wait for help from another IT department.

Protection of data before updates and changes

By creating a backup before software updates and system changes, you are able to always restore the previous version.

FEATURES

- → You can create backups for one, multiple, or all volumes connected to a server at any time.
- → The advanced custom backup schedules enable automated backups to be created.
- → The retention period after which backups are automatically deleted can be freely selected.
- → It is possible to partly restore certain files by seamlessly restoring a volume backup to a new volume.

BENEFITS

- → The crash-consistent backup gives your company optimum protection.
- → You can create flexible custom backup plans and retention periods.
- → The service gives you autonomy, as you can help yourself at all times.
- → All backup requirements for your security concept are met.
- → You retain your excellent reputation because you prevent long outage times and meet all customer expectations for data recording and retention.
- → You save IT staff time because backups and monitoring are automated.
